Foreword

Sanghamitra wishes everyone a happy, prosperous, healthy, memorable new year and wishes for Pongal also. In one year, Sanghamitra English version gained many well wishers and readers. Sanghamitra is glad that many readers are interested in problem solving techniques and puzzles. Sanghamitra team is receiving tons of mails filled with new year greetings and requests for new articles. We thank all those who sent mails with wishes and feedback.

Sanghamitra received lots of mails regarding the cover page, Medhavadhanam, Kids' corner, Salutation to your solution etc. Sanghamitra started an article 'Words Of Wisdom' in this issue and planning to start 'Mathematrix' and 'Noted personalities in history' etc in the next issue. If you wish to extend your hand, please send mail to editor@sanghamitra.org.

We received calls from different parts of US for Vedic Mathematics classes. Due to time constraint we couldn't make it in 2008. We are going to share this knowledge in 2009. Most of the readers might have passed some resolutions for 2009. Hope you achieve the goal and succeed in all the best things you attempt. Sanghamitra is focusing on Vedic Mathematics this year.

Sanghamitra want to focus on meditation and peaceful living this year. Many countries in the world are raging war, violence is taking over peace, out of greed everyone is after money and giving up the basic human values. Sharing and Caring are getting limited to stories and movies. Each and every individual should come forward and share the excess food, clothing and other basic needs. We need to remember Mohan Das K. Gandhi's words in this context "***You should be the change that you want to see in the world***".

Let us meet again in the next issue due in April.

-Sanghamitra Team.

Importance of Pongal.

Seeing the cover picture, you might have gone into vacation mood. Am I right? But, some thing special about the picture. Sun rise takes place everyday, but Sankranti day (January 14th or 15th) the sun rise is different, where Sun's direction is changed. Sankranti (in Andhra Pradesh), also known as Pongal (in Tamilnadu), Khichiri (in Uttar Pradesh), Maghi (in Punjab), Sakarat (in Madhya Pradesh), Bhogali Bihu (in Assam) is a festival celebrated on the day when Sun enters into Capricorn from Sagittarius, during the winter solstice in the northern hemisphere. Six months starting from this date is called 'Uttarayana' and the following six months is called 'Dakshinayana'. Uttarayana is believed to be the day time for 'Devas' and thus it is auspicious time.

Most of the places it is celebrated as harvest festival. Fresh crop arrives home, the grains & pulses are boiled in milk, butter is added and offered to Sun. Prayers are offered to Sun god requesting him to bless knowledge and wisdom. Remembering ancestors, Annadana (food donation) is done on this day. Seeking blessings from elders is very common. Donations are given generously to needy people. Usually elder family members bless the youngsters and provide gifts.

There is another belief from Mahabharata, Bheesmacharya (having boon of Icchamrityu) stayed on 'bed of arrows' awaiting this auspicious day and left his body during 'Uttarayana'. Puranas say that Sun visits the house of his son Shani, who is the master of Capricorn. Sun and Shani do not get along nicely, but Sun meets his son on this day, which denotes the importance of father-son relation..

All of us know Ocean is made of so many water droplets. Similarly if everyone contributes a penny from their income and spends it for the welfare of less privileged, the world will be different. But, it will not happen overnight. A thousand mile walk also begins with a single step. So let us take that first step. Let us make this as our resolution for this new year 2009.

Let us all wish for a peaceful world! Let us all work for a better world where every one gets enough Food, Clothes and Shelter. Let us become friends of our society, Sanghamitra. Wishing you all a happy new year.

- SuSri.

Words of Wisdom

Take Initiative

First I would like to thank Didi for allowing me to publish her simple and strong words through 'Words of Wisdom', which are capable of transforming a person and lead them towards enlightenment. When I first heard Didi, I felt 'WOW!'. I know 'Words are powerful', but I experienced the fact in Didi's presence. May her blessings enlighten many souls and change the world into heaven. Didi (Shri Siddheshvari Devi) is the founder of Radha Madhav Society. Visit www.radhamadhavsociety.org for a listing of Didi Ji's upcoming lectures and retreats.

We often hold ourselves back, thinking that we cannot do a certain work. Many women refuse to learn how to drive on the highway, or put gas in the car. Why? Because they feel they cannot do it. They refuse to learn how to change a tire, because it's the husband's job. Many men refuse to take the initiative to cook a meal or do the laundry. Why? Because it is the wife's job.

Many times we see something that needs fixing, but we wait for someone else to fix it. We see work that needs to be done, and we say that someone needs to do it. We go to the neighborhood park and see litter strewn there. We express our disgust and wait for someone to pick it up. When we see something is not up to par, we say, "Someone needs to do something about it." Who is this someone? It is YOU.

Next time you see something that needs to be put right, set the wheels in motion. If you do not know how to do it yourself, find out how to do it. Seek help.

If there is some law that you feel needs changing, take initiative and try to get it changed. I like the attitude of a freshman I know. She has just started college. The first thing she noticed was that there is too much air conditioning in the dorms. She is planning to join the Students' Council and work on reducing the amount of air conditioning each building is using.

If you wish to fix or make improvements in your life, your family, your neighborhood, your campus, your city, your country or the world, you must take initiative. *

Your Questions – Our Answers

Ramesh Kalapatapu, Dallas, TX.

I am a regular reader of the Sanghamitra online magazine. You are covering very good aspects of Telugu people like Acharamulu – Anthraardhamulu, Ramayanamlo, Meeku telusa? Sametha Kathalu, Pada chadarangam, Charitra kekkin Charitardhulu etc. In October Pada Chadarangam, the Clue for Across 7 is wrong and there is no clue for Down 7. Hence it is not possible to send answers. May be it is a typo error. Can it be corrected on the website?

- *Thank you very much Mr. Ramesh for letting us know the mistake. We corrected the mistake immediately after seeing your mail. We once again appreciate your interest. We are planning to introduce few more new articles for your entertainment as well as knowledge. Stay tuned!*

Raghava Rao Mandava, Chicago, IL.

Dear Sri garu,

It is very interesting. There are so many games, puzzles and what not for children. I have a one cent worth of idea. It is free. Please think of developing some games and puzzles and put them on the internet at a cost to develop more on Maths from our Vedas. It can be non-profit if you so choose.

- *Thank you very much for your suggestion Raghava Rao garu. We will certainly consider your suggestion. In fact, we are thinking in those lines, but due to lack of work force it is getting delayed.*

Anant Karanam, Cupertino, CA.

Read some of the articles like Acharamulu-antarardhamulu, Sameta Katha etc. They are excellent.

- *Thank you very much for your interest and we are glad you liked those articles.*

Rating of articles based on the readers' letters:

1. Mathematrix (37%)
 2. Kid's corner (32%)
 3. Salutation to your Solution (11%)
- Followed by Jokes and Cover Story.

We are glad to see lots of mails requesting Mathematrix. Sanghamitra proudly announces resuming of Mathematrix in April issue. Stay tuned!

Smile if you wish

Joke!

Ram : Shyam! I heard a new joke last week. I do not remember whether I told you.

Shyam: Was it funny?

Ram : Yes!

Shyam: Then, you didn't.

Ram : ??? ☹

Parachutist!

Parachutist : (With a smile on his face for winning the sky diving gold).

News Reporter: What made you take up the sport of sky diving?

Parachutist : A four engine aircraft with three dead engines.

News Reporter: ☹

Crash course!

Candidate : Sir! I would like to learn flying.

Flight school: Sure! Can you please enter the information in this form?

Candidate : (While filling, he finds 1 year training or 6 months training class)

Sir! I want to learn it in few days, in the worst case within a week.

Flight School: Sorry sir! We are not offering any 'Crash course'.

Candidate : *Crash Course! I am not willing to take either* ☹

Legs are not empty!

A teacher was explaining about the circulation of the blood.

Teacher : Class, if I stood on my head, the blood, as you know, would run into it, and I would turn red in the face.

Ravi : Yes!

Teacher : Why is it that while I am standing upright in the ordinary position the blood doesn't run into my feet?

Ravi : Because ... because your feet are not empty!

Teacher : ☹

Dog steals!

A teacher wanted to explaining about heat energy and trying to get the word 'heat' from students.

Teacher : Students! Let us learn a new topic today. Answer my questions?

Students: Yes, Teacher!

Teacher : Suppose you took a small bowl of butter and put it in Sun, what happens? (expecting an answer saying 'butter melts', latter to explain that it is because of heat.)

Student : Dog steals away the bowl.

Teacher : ☹

Let us see some more jokes in next issue. Till then, Good Bye!

Salutation to your solution!

- Sudhakar Attili.

1. In an equilateral triangle, lines are drawn from each vertex to the opposite side to a point trisecting the side. Now there are 7 segments. It is found that the area of each segment is a multiple of $1/21$ of the total area. Can you give the proportional area of each segment?
2. Find the value of $\{2 - 4 + 6 - 8 + 10 - 12 + \dots \text{ up to } 198\}$.
3. Find the next number in the patterns below
 - (a) 60, 90, 108, 120, 128.571428, 135, 140, ?
 - (b) 3, 7, 15, 31, 63, ?
4. There were three thieves who stole whole lot of money from a bank. They could not count the money at that hour, so they decided to go to bed. The first thief woke up after some time, he was genuine enough to divide the whole money into 3 equal parts and leaving the 2 parts in its location. The second thief got up after some time, (like minded people only can work together) he divided the money into 3 equal parts and left the 2 parts. Then the third thief got up and took his one part leaving the other two parts. When they got up in the morning they divided the money into three equal parts and took their parts. By doing this they got the money in a ratio 35: 26: 20. The total amount and the individual amounts are exactly in thousands. Can you tell the money they stole in the beginning?
5. A person is driving a car with a velocity of 12.8 ft/sec. He sees a person crossing the road 6 yards away. He applies brakes at a deceleration of 16 ft/sec^2 . Can he be able to stop the car without hitting the pedestrian?

You can send your answers either by post or by e-mail to the below address on or before March 15th.

The buzz about birds!

- Sravya Ainapurapu.

- Did you know that the bee humming bird of Cuba is no bigger than a bumble bee?
 - Did you know that the African Ostrich can grow to over eight feet tall. That is, taller than an average man. Wow!
- An eagle can catch prey heavier than itself. Amazing! Isn't it?
 - Awesome! The Andean condor from South America is the biggest bird of prey, it has a wingspan of over nine feet and it weighs up to 24 pounds.
- Did you know the peregrine falcon can travel faster than an express train? Yes, when it spots its prey the falcon folds its wings close to its body and dives at up to 220 mph.
 - A flamingo gets its colors by the food it eats. Did you guess?
- Did you know that swans have about 25,000 feathers, that is more than almost any other bird.
 - Woodpeckers use their beaks to find bugs that are in the wood of a tree. Cool!
- Pelicans can hold more fish in its beak than its stomach. Believe it or not, it is true!
 - A parrot's beak is so strong that a parrot can climb with it. Won't you say Wow!
- Did you know that the bee hummingbird's nest is the same size as a thimble.
 - Is it true that nests are birds' homes where they sleep at night? No actually birds only use their nests for raising their chicks.
- Guess what, when a bird stands on one leg it is keeping its foot warm. Did you know this for sure?

Hope you enjoyed the facts. See you in next issue.

Special 2009

- Sreenivasa Rao Ainapurapu.

Every year is special by itself. Let us analyze a bit about it. Probably it might make you think in the similar lines. If you some number next time, you certainly tweak it and see you can find something special about it.

Consider 2008, it is having factors 1, 2, 4, 8, 251, 502, 1004 and 2008. First 4 factors (1, 2, 4 and 8) and Last 4 factors (251, 502, 1004 and 2008) are in geometric progression. The number 2008 also can be written as sum of cubes of three different numbers 4, 6 and 12, i.e., $2008 = 4^3 + 6^3 + 12^3$.

What about 2009? Come up with something.

Here is my thought. This number can be written as sum of the cubes of 4 different numbers, in two different ways.

$$\begin{aligned} 2009 &= 1^3 + 4^3 + 6^3 + 12^3. \\ 2009 &= 4^3 + 6^3 + 9^3 + 10^3. \end{aligned}$$

It is having 6 factors including 1 and the number itself.

Factors of 2009 : 1, 7, 41, 49, 287, 2009, prime factors being 7 and 41.

If 2009 is converted into Octal system (Base 8), it is 3731, which is equal to 11111011001 in binary system.

2009 is sum of two consecutive numbers 1004 and 1005.

2009 can be written as the sum of squares of three numbers like shown below.

$$\begin{aligned} 2009 &= 3^2 + 8^2 + 44^2. \\ 2009 &= 4^2 + 12^2 + 43^2. \\ 2009 &= 7^2 + 14^2 + 42^2. \\ 2009 &= 3^2 + 20^2 + 40^2. \\ 2009 &= 2^2 + 22^2 + 39^2. \\ 2009 &= 6^2 + 23^2 + 38^2. \\ 2009 &= 8^2 + 24^2 + 37^2. \\ 2009 &= 18^2 + 23^2 + 34^2. \\ 2009 &= 12^2 + 29^2 + 32^2. \\ 2009 &= 16^2 + 27^2 + 32^2. \\ 2009 &= 22^2 + 25^2 + 30^2. \end{aligned}$$

2009 can be written in another way $1 + 2 + 3^4 + 4 + 5^4 + 6^4$.

We can find many more interesting things if we analyze the numbers.

Numbers are fun! Keep watching the numbers and play.

Kids' Corner

- Sudhakar Attali.

[A story by Bhagawan Sri. Satya Sai Baba]

Impatience

A devotee worshipped sincerely the goddess of wealth for a number of years. The goddess did appear before him and asked him what he desired. He said, "Oh Mother. You must come with me and stay at my house".

The goddess replied: "I will certainly go with you but there is one condition. You must walk ahead of me and you should never look back. If you do, I will stay on that spot forever".

Filled with joy the devotee strode ahead towards his home. The jewels of the goddess were making all kinds of sounds as she walked behind him.

Unable to restrain his curiosity just to take one look at the jewels the goddess wore he turned back. The goddess stood then and there rooted to the spot. The poor fellow could not do anything but weep. He could not wait patiently to look at the goddess till he reached home.

What do we learn from this story?

Though one is blessed with an abundance of Divine Grace as the devotee in this story, but unless one has the capacity to follow the command of the divine, one cannot experience the benefits of grace. Doubt in the case of a devotee spells disaster.

Can you find the word?

1. This is a 6 character word, means 'injure by excessive stretching'.
2. Ignoring first character, the word is one kind of transportation.
3. Ignoring first two characters, the word means 'atmospheric moisture falling as separate drops, a type of precipitation'.

Cross Word for kids

Across : 2. The planet close to Sun, an element in periodic table. (7)

4. Second and Fourth letters of the word meaning 'Boundless expanse in which all objects exist and move'. (2)

6. The 6th planet from Sun, ends with a 'turn'. (6)

9. The farthest planet from Sun, a Disney character. Jumbled!(5)

10. The 7th planet from Sun. (6)

12. Does all the planets have atmosphere for humans to survive? (2)

13. The planet in between Earth and Mercury. (5)

Down :

1. The planet little closer compared to 'Across 9' and ends with a 'tune'. (7)

3. Mixture of Hydrogen, Oxygen, Nitrogen etc. Upside down! (3)

5. Ring of light round something. Adding two more letters 'r' and 'y' at the end means 'One of the arteries supplying blood to the heart'. (6)

6. The star around which the planets (Mercury, Venus, Earth etc.) are revolving. (3)

7. Specialty of Saturn. (5)

8. The celestial body that causes Solar Eclipse when it comes in between Sun and Earth. Upside down. (4)

11. The planet which is often called 'red planet'. Upside down! (4)

Cows Vs. Sheep!

We all know Jesus was born as a shepherd and Krishna was born as a cowherd. Both of them are enlightened beings. Suppose if they meet each other, they shake hands and the place glows with energy. Masters are embodiment of existential energy (god himself) and they show compassion towards every creature no matter what it is.

But the cows and sheep (so called disciples) always fight! They should understand that the ultimate goal of all masters is same, to keep the universe peaceful and blissful. They adopt different paths. That's all!

Kids Challenge!

Did you find the word?
It is "TEACHER".

Smart kids :

1. M. Swetha, Hyderabad.
2. D. Aditya, Lucknow.
3. Sravya Ainapurapu, St. Louis.
4. Sruthi Ainapurapu, St. Louis.

Kids' 'X'word Winners:

1. A. Lakshmi Puja,
Visakhapatnam.
2. A. Swathi Keertana,
Visakhapatnam.
3. D. Aditya, Lucknow.
4. Sravya Ainapurapu, St. Louis.

Salutation to your solution! - Answers

1. 28 years.

Solution: Mohan's birthday is on February 29th, a leap year. He celebrates his next birthday after 4 years. On the selected year his birthday falls on Wednesday. After 4 years it falls on Monday (as a year consists of 365 days, which is 52 weeks and a day, that adds 4 days in 4 years + 1 day for leap year). After 8 years it falls on Saturday. So after 28 years, his birthday falls on Wednesday again.

2. 2 and 6 or 6 and 2.

Solution: 1A99B is divisible by 36, which means divisible by 4 and 9. Now for any number to be divisible by 9, the sum of the digits should be divisible by 9.

So $1 + A + 9 + 9 + B = 19 + A + B$ is divisible by 9 $\Rightarrow A + B$ is either 8 or 17.

As the number is divisible by 4, which means the last 2 digits should be divisible by 4. So 9B should be divisible by 4. So B value is either 2 or 6 (as 92 & 96 are divisible by 4). With these values of B, $A + B$ can never be equal to 17. So $A + B$ should be equal to 8, which indicates if B is 2, A is 6 or if B is 6 then A is 2.

3. (a) Circle, Pentagon, Square and Triangle.

(b) Triangle, Square, Pentagon and Circle.

Solution: (a) Let us take Triangle, Square, Pentagon and Circle having same perimeter. If we take 60 units of perimeter, then the side of equilateral triangle is 20 units and the area is $(\sqrt{3}/4) \times 400 = 173.2$ sq. units. the side of square is 15 units and area is $15^2 = 225$ sq. units. the radius of circle is $105/11$ units (as $2\pi r = 60$) and area is $\pi \times (105/11)^2 = 3150/11 = 286.36$ sq. units.

So depending on number of sides - the more the number of sides, the more the area. [Assume circle having infinite number of sides.] Thus the figures having largest area to smallest area are Circle, Pentagon, Square and Triangle.

(b) Let us take Triangle, Square, Pentagon and Circle having same area. If we take 173.2 square units area, then

the side of equilateral triangle is 20 units (as $(\sqrt{3}/4)a^2 = 173.2$) and thus the perimeter is 60 units.

the side of square is 13.1 units (as $a^2 = 173.2$) and thus the perimeter is 52.4 units.

the radius of circle is 7.42 units (as $\pi r^2 = 173.2$) and thus circumference is $2\pi \times 7.42 = 46.64$ units.

So depending on number of sides - the more number of the sides, the less perimeter. Thus the figures having largest perimeter to smallest perimeter are Triangle, Square, Pentagon and Circle.

4. 36, 72, 36, 36 respectively.

Solution: Students who like Mathematics 45%, Science 60%, Social studies 70%. Students who like both Mathematics and Science is 15%, Science and Social studies 35%, Mathematics and Social studies 20%. Students who like all Mathematics, Science and Social studies are 5%. Students like only Mathematics are $45 - 15 - 5 - 20 = 5\%$. Students like only Science are $60 - 15 - 35 - 5 = 5\%$. Students like only Social studies are

$70 - 20 - 35 - 5 = 10\%$. Students that doesn't like any of the subjects = $100 - 5 - 5 - 10 - 15 - 5 - 20 - 35 = 5\%$. Total number of students = 720. So students like only Mathematics, Science, Social studies are 36, 36 and 72 respectively. Students who doesn't like any of the subjects are 36.

Using set notation

Students who likes only Mathematics = $M - (M \cap Sc) - (M \cap SS) + (M \cap Sc \cap SS)$

Students who likes only Science = $Sc - (Sc \cap M) - (Sc \cap SS) + (M \cap Sc \cap SS)$

Students who likes only Social studies = $SS - (SS \cap M) - (SS \cap Sc) + (M \cap Sc \cap SS)$

Students who doesn't like any of the subjects = $U - (M \cup Sc \cup SS)$

5. 135ft from ground.

Solution: One object is dropped from a height 160 ft. A bullet is fired from ground with a velocity of 128ft/sec. If the bullet and object meet 'S' ft from ground. Then

$$160 - S = 0.t + \frac{1}{2} \times 32 \times t^2 \quad [\text{using } S = ut + \frac{1}{2} at^2]$$

$$S = 128t + \frac{1}{2} \times (-32) \times t^2$$

$$\text{So } 160 - 16t^2 = 128t - 16t^2$$

$$160 = 128t$$

$$t = 160/128 = 5/4 = 1\frac{1}{4} \text{ Sec.}$$

$$\text{Thus } S = 128 \times 5/4 - 16 \times 25/16 = 135 \text{ ft.}$$

Question Gallery! - We ourselves disclosing answers!!

1. Dadabhai Nauroji was given a title 'Grand old man of India'.
2. Ravindranath Tagore wrote "Post Office".
3. Jawaharlal Nehru memorial in Delhi is called Shantivan.
4. Panama Canal is a man-made canal in Panama which joins the Pacific and Atlantic oceans.
5. The capital of Siria is Damascus.
6. Kaleidoscope is a tube of mirrors containing loose colored beads, pebbles or other small colored objects. The viewer looks in one end and light enters the other end, reflecting off the mirrors. Typically there are two rectangular lengthwise mirrors. Setting of the mirrors at 45° creates eight duplicate images of the objects, six 60° , and four at 90° . As the tube is rotated, the tumbling of the colored objects presents the viewer with varying colors and patterns. Any arbitrary pattern of objects shows up as a beautiful symmetric pattern because of the reflections in the mirror. A two-mirror model yields a pattern or patterns isolated against a solid black background, while a three-mirror (closed triangle) model yields a pattern that fills the entire field.
7. One mile is equal to 1760 yards.
8. Symbol of Lithium is Li.
9. Sharat Chandra Chatterji is a well known Bengal novelist. 'Devadas' movie is produced in various different languages based on his novel.
10. The word 'Grand Master' is used in Chess.

Concluding word

Dear readers,

Sanghamitra wishes you all a happy, prosperous, healthy and blissful new year 2009 (See the importance of the year in **Special 2009** article). Now we are realizing the importance of time management after seeing so many letters asking for new articles and more number of pages. We are working hard to satisfy majority of the readers. We are starting a new article **Words of Wisdom** (You should say WOW! after reading it) with the blessings of Didiji, founder of Radha Madhav Society. '**Mathematrix**' is going to amaze you starting April issue.

We request you to send articles either a science article, news article, about culture or anything that you think is useful for the readers. Send any articles or your feedback to .

We are working on giving prizes to winners by contacting friends' network. Send your answers before March 15th either by E-mail or Postal mail. Encourage your kids to do Kids' Xword and other challenges. Tell your friends about Sanghamitra.

Note : Answers should be sent on or before March 15th.

Sanghamitra Team.
